

01 / TECHNICAL OVERVIEW

Cementare Surface Coating

Technical information and key advantages

WHAT IS CEMENTARE?

Cementare is a cement-based coating that can be applied in a thin layer (approximately 1-3 mm) over a range of different surfaces, including tile and wood. It provides a hygienic, stain-resistant surface for bathrooms and kitchens. Cementare is slip-resistant and mould-resistant, making it an excellent choice for interior and exterior floors, walls and furniture surfaces.

READY-PACKAGED

Pre-packaged mix

FAST DRYING

Saves project time

THIN LAYER

Approx. 1-3 mm

VERSATILE

Interior and exterior surfaces

WHY USE CEMENTARE?

Ready-Packaged

Cementare comes as a pre-packaged mix. The formulation requires no special mixing equipment and allows manual application.

Fast Drying

Cementare dries quickly after application, saving time in project completion. It does not require expensive or professional tools for application.

KEY ADVANTAGES

- No compaction required, so no heavy machinery is needed.
- Low permeability makes it suitable for exterior surfaces, kitchens and bathrooms (wet areas).
- Can be applied to almost any surface.
- Chloride-free, providing a safe and durable surface option.
- Does not shrink after application, which means cracks or curling will not form.

02 / APPLICATION

Application and Performance

Surface preparation, mixing and application areas

01

INFORMATION

SURFACE PREPARATION

The first stage of Cementare application is surface preparation. The surface to be coated must be clean, level and free of gravel, sand and dust.

SURFACE

Clean / level

PURPOSE

Sound substrate

02

INFORMATION

MIXING AND APPLICATION

Cementare can be mixed by hand; for larger projects, a mixing container may be used if required. The amount of water depends on the mix. Add water gradually while mixing Cementare. Apply immediately after the mix has been fully prepared.

APPLICATION

Clean tools

FINAL STEP

Smooth / dry

PERFORMANCE & APPLICATION AREAS

SAVES TIME

No need to remove the existing surface; provides high adhesion to ceramic, mosaic, epoxy and steel.

DRIES QUICKLY

Thanks to rapid curing, it can be put into use after 3 hours.

ENVIRONMENTALLY FRIENDLY

Suitable for recycling.

HEAVY-DUTY TRAFFIC

High compressive strength (40 MPa), low shrinkage and a strong surface.

MANY COLOURS

Decorative, naturally mottled and seamless raw-concrete appearance.

ALTERNATIVE SOLUTIONS

Level adjustment with 1-3 mm thin layers or levelling with fill coats.

03 / SPECIFICATION

Technical Specification

Cementare surface coating system

- 1 Applied in thin layers of 1-3 mm.
- 2 Scratch-resistant and suitable for interior and exterior weather conditions.
- 3 Suitable for use in wet areas.
- 4 Waterproof and slip-resistant.
- 5 Suitable for use on walls, floors and furniture surfaces.
- 6 Provides a continuous, single-piece surface appearance with no joints.
- 7 Easy to maintain and does not require professional tools for cleaning or maintenance.
- 8 The final coat shall be a cement-based coating with decorative and durability properties.
- 9 The product shall not be paint-based.
- 10 Powder colouring pigments may be added to achieve colour matching in grey tones.
- 11 The product shall be applied and finished with a trowel.
- 12 Water shall be the additional component of the product.

CEMENTARE

Designed for a seamless, durable and modern appearance on interior and exterior surfaces.
